

Chemical Industry

Chemical procedure such as chemical reactions is applied in chemical plants to shape new substances in different types of reaction vessels. In numerous cases the reactions are conducted in particular corrosion resistant tools at elevated temperatures and pressures with the make use of of catalysts. The products of these reactions are separated by means of a multiplicity of techniques including distillation especially fractional distillation, crystallization, sublimation, adsorption, precipitation, filtration, and drying. The processes in addition to product are frequently tested during and after manufacture by keen instruments and on-site quality control laboratories to ensure safe and sound operation and to give surety that the product will meet required specifications. We manufacture a broad range of products to supply this group of industry. Check our listed products which you must be with at your premises for your Filtration & separation needs.

Our Few products for the Chemical Industry are:

1. [Dust Collector spares](#)
2. [Fluid bed dryer \(FBD\) bags](#)
3. [Liquid / solid separation solutions](#)
4. [Screening mesh](#)
5. [Cartridge filters](#)

Amrit Filtration Equipment
