

# Dust Collector Spares (Reverse Air Type)

- **Reverse air type filter bag**

Filter bags are one of the most essential elements of a dust collector. We manufacture filter bags for reverse air type dust collector in numeral designs, Amrit Filtration Equipment's give particular consideration on fabric choice, fabrication practice and designs to give the preminent performance out of your Reverse air Dust Collector.

- **Clamps**

Clamps play a fundamental role in reverse air type dust collector. The clamps must be planned to hold the filter bag adjacent to the airflow and during the shaking practice. We produce clamps especially designed for dust collector application.

- **Timers**

Proper De-dusting is very essential in dust collectors. It ensures extended life of filters and high production speed. We automate the De-dusting procedure with our sequential timers. The timer will be in command of the airflow in all the chambers as preferred and also control the shakers & sonic horns if installed along with.

- **Flexible bellows**

When functioning with gigantic motors, fans, and impellers dropping vibration becomes an essential task. We manufacture stretchy fabric bellows which can be set up in the ducting joints to lessen vibration.
